**Subject:** FW: Gold King Mine - Water Treatment

Steve,

The message below is from a water treatment vendor that has work on mine water treatment interested in seeing if there is a business opportunity at the Gold King Mine. I think you are familiar with their process at the Mike Horse Mine in Montana.

Victor

**Subject:** Gold King Mine

Mr. Ketellapper –

Dave Stewart indicated that you might know who I should talk to on the Gold King Mine. We have background in Mine wastewater clean-up. We helped on a similar project in Montana on the Upper Blackfoot River after a contaminated spill and seepage. The system treats the water coming out of the mine and discharges it back to the river system to ensure no issues or contamination. The system works extremely well up there and has been awarded by several entities on its abilities. Please let me know who I can talk to about this to see if there is anything we can do.

Thank you,

Andrew Stewart
